

## **IAM EXPO PRESENTS AT SAIEDUE LIVING 2006 THE NEW MATERIALS FOR ARCHITECTURE, INTERIOR FINISHINGS, BUILDING RENEWAL AND TECHNOLOGIES**

The innovative materials spotlighted at SAIEDUE LIVING come from the aerospace and automotive industries, pharmaceutical research, the fashion industry and optics and technology sectors.

Though originally designed for applications remote from the construction industry, the materials featured in the library (pavilion 35) can also find use in architecture, where they can lend products new aesthetic and emotional value, enhanced performance and greater wear resistance. New materials can also suggest new building standards and new architectural styles: that is why SAIEDUE LIVING is making room for new materials alongside wood, aluminium, steel, plastic and ceramics.

To explore the revolutionary potential of new materials and manufacturing methods, every month Material ConneXion adds new materials selected by an international jury from a large pool of samples sent directly by companies or sought out by specialised technicians for their innovative character, technical features and possibilities of application.

The wealth of the Library will enable professional visitors to SAIEDUE LIVING to draw new inspiration from the innovative materials on display: hundreds of combinations are possible among materials conceived to meet the requirements of specific sectors and architecture. It will up to architects, designers and companies to pick up the most innovative ideas from IAM EXPO, where materials from the MATERIAL CONNEXION Library will be featured in an exclusive show at SAIEDUE LIVING 2006.
