TRANSPARENCY FOR ARCHITECTURE-Exhibition Pathway at Saiedue Living 2006

Designing with glass: environment, design, safety and security, comfort and future

Tuesday 14 March Saiedue Living will be opening in Bologna. The main feature will be **Transparency for Architecture – Exhibition Pathway**, an Event of extraordinary communicational importance dedicated to **glass for architecture**.

The exhibition pathway which will welcome visitors to Saiedue Living 2006, with its over one thousand square metre Services Centre, represents the first European show to feature, in a star-shaped pathway lined with wood and metal, all the opportunities offered by glass to the architecture and building of the third millennium and confirms the ongoing renewal of the Bologna show in line with the design and production leadership of the Italian building envelope industry.

Transparency for Architecture, designed by **Uncsaal** and organised in conjunction with **Federlegno-Arredo**, **BolognaFiere** and **O.N. Organizzazione Nike**, can count on the support of all the industrial Associations of the Italian building trade production line.

A large star-shaped structure, designed and built, from the floor to its five summits, to communicate relations between building glass and the **Environment, Comfort, Design, Safety and Security** and the **Future**. Transparency for Architecture will welcome visitors with a double mode of interpretation: to present to the public, through high-impact scenic solutions, the enormous potential of light envelopes in terms of wellness, saving and sustainability and provide the design and building world, by means of a technical-scientific path, with the most innovative solutions of acoustic, heat, optical-light, low-emission, bullet-proof, etched, luminescent, photo-chromatic, glazed, liquid crystal, photovoltaic, X-ray shields and self-cleaning slabs.

A three-dimensional star with one hundred linear metres of glass slabs, over fifty types of products, the three world leaders in the field of building glass and the major Italian transformers: all these factors together ensure completeness, originality and scientific value to an event that wishes to continue along the popularising path undertaken by Grandi Involucri, the Exhibition Pathway which, during the course of Saiedue Living 2005, presented over 130,000 building trade professionals with eight large European architectural light envelope building projects.

Transparency for Architecture, organised, for Uncsaal, by Adriano Crotti and Paolo Rigone will be open from 14 to 18 March at the Service Centre of Bolognafiere.
